

List of products

stgwood is placed close to the resource: Pine, Eucalyptus, Oak and Chestnut forests have been growing in the area for years.

The expertise of stgwood team in the wood business makes possible to offer always good value-for-money products and, even more important, to secure quality according to international standards and customer specifications

The company is a **leading exporter** of logs and lumber as well as manufactured wood products in the North of Spain. Products supplied by stgwood are classified in five categories:

LOGS

LUMBER

SOLID WOOD

ENGINEERED WOOD PRODUCTS

FIREWOOD

Eucalyptus Globulus

Eucalyptus Globulus is one of the most appreciated wood species for paper pulp production due to its properties of long and flexible fibre. **stgwood** supplies break-bulk shipments on a regular basis to some of the main paper mills in the world. Also, the option of Eucalyptus chips can be studied for some markets.

Pine Logs

Pine forests cover approx. 40% of the total area of the northwest of Spain. Pinaster or Maritime Pine is the main local specie but also Radiata Pine is widely available in our area. **stgwood** supplies Pine Logs to sawmilling industry, but also huge volumes for chipping, biomass, and paper pulp industry. The logs are available in different lengths and sorted by diameter. It is possible to supply it with bark or debarked

Radiata Pine

Radiata Pine is a versatile timber that grows in the Galician forest. **stgwood** currently provides a wide range of Radiata Pine products and qualities, from COL to Mill Run or Industrial Grade. Full lengths, fixed widths or even S4S; From Kiln Dried to Air Dried or Green lumber. The Company also takes care of any process required for the forwarding such as NIMF 15.

Pinaster/Maritime Pine

The natural prune of this European Pine allows this specie to offer a high percentage of knotless timber. It also presents a higher mechanical resistance than Radiata Pine. **stgwood** is able to supply this lumber to its customers under any specification.

Eucalyptus Globulus

It is also known as White Eucalyptus or Tasmanian Oak Eucalyptus Globulus lumber is durable, hard and resistant. The density is around 800Kg/m³, while dimensions are restricted to a maximal length of 3100mm and 120mm width. Planks and blocks provided by **stgwood** are knot-free and 100% heartwood.

Chestnut

Chestnut coming from the north of Spain and Portugal is known as Sweet Chestnut and it is available in a wide range of qualities and sizes. It is a hardwood which is very much appreciated both for decorative purposes and constructive applications.

Pine

Solid Pine is used for flooring, wall panelling and façade building. There are many reasons for using Solid Pine instead of other species: It offers a natural look, is affordable and also makes possible to get lighter colours. **stgwood** selects and supplies the best Pinaster Pine wood in order to take advantage of its higher hardness and better durability.

Oak

Oak is a standard for solid wood floorings. Durable, hard and good-looking, Oak boards are easy to recognize and their value is widely recognized. **stgwood** is placed in a region where Oak has been growing for centuries and therefore is able to supply oaks blanks for any purpose.

Eucalyptus Globulus

Eucalyptus is an innovative alternative for solid flooring, decking and wood facade. It is a hardwood, is durable and is also environmentally friendly, as it is the only hardwood which is fast-growing. The natural durability of this wood is so that it can be used outdoor for decking and facades. **Stgwood** proudly supplies Quarter Cut planks that are 100% heartwood, knot-free and with straight fibre.

Chestnut

Chestnut coming from the north of Spain and Portugal is known as Sweet Chestnut and it is available in a wide range of qualities and sizes. It is a hardwood which is very much appreciated both for decorative purposes and constructive applications.

FOREST VALUES

Precast Concrete Trays

Made of Pinaster Pine, **stgwood** trays are suitable and compatible with all the main brands of production lines of Concrete Blocks. The company currently exports in different formats and dimensions to customer all over Europe, Middle East and Asia.

Eucalyptus Globulus Profiles

stgwood profiles are made with the best Eucalyptus Globulus timber. Due to its high quality, the profiles are mainly used for window carpentry, wood turning and also for structural purposes. The profile should always have three lams and its dimensions can be set by the customer.

Pinaster/Maritime Pine Profiles

Profiles are made with clear boards being all the pieces knots-free. The result is a wood profile with a light density which is also easy to work with. **stgwood** currently supplies this product for furniture and windows carpentry, but it can also be used for structural purposes.

Eucalyptus Globulus Edge Glued Panels

Produced using the best Eucalyptus Globulus timber, the Edge Glued Panels provided by **stgwood** are high performance boards: hard, resistant and durable.

Oak

Oak is probably the best wood to feed a fireplace: the higher calorific power, the lower emissions of smoke and most easy wood to burn. **stgwood** collects oak firewood from old trees to ensure the higher density and supplies wood pieces with the optimal dimensions and correct moisture content.

Eucalyptus

Due to its high density, Eucalyptus is an alternative to Oak firewood. **stgwood** is currently working to produce Eucalyptus firewood with all warranties and will soon offer this product to its customers.
